

COVER CURTAIN

COLLECTION 2020

Cover Curtain a spatially room divider meets a book shelf. Showcasing your favourite book covers as a rhythmic moodboard in space. Cover Curtain works as an instrument with endless possibilities. Created to proudly show your hidden gems and prevents piling up endless towers of unread magazines.

Cover Curtain comes in three different colours. Our basic module comes in sandblasted brass-coloured aluminium, which is light and free of corrosion. Alternative colours are "Silver-gray" and black. Custom colouring on demand.

Cover Curtain has many custom options. We can curve, change color and sizing. We imagine the Cover Curtain in different spaces, like waiting rooms and restaurants. It can be a very personal showcase, because it shows the covers.

SUGGESTIONS

Copy Curtain gives you endless possibilities in compositions.

Choose the number of modules and suspension wires to your wishes and vary in shapes and sizes. It is possible to add modules and wires to your collection in a later stage due to the modular railsystem.

DISCOVER

VANTOT works in translating innovative and experimental ideas into refreshing applications, products, and installations. Sometimes, products are made on request as a project. We are specialized in lighting and also creating other products in different categories which will be shown in the following content.

VANTOT

For Dutch duo VANTOT, it's all in the name. Literally translated from Dutch to mean 'from to', VANTOT focuses on the entire process, starting with a technique and ending with the product. The pair strives to find new applications for innovations in everyday life, and it's not only new-found technologies which have seized their interest. Serving as a guiding light in the duo's work, antiquated techniques are put to good use in modern day outlets, mutually benefiting from today's updated knowledge base.

Take electricity. Although light bulbs have been around for centuries, innovations – such as the rise of the LEDs – have made continuous evolution possible. And today, electronic devices operate on much lower voltages than ever before, significantly decreasing its hazardous aspects. While direct contact with electricity – and light – used to be a no go, recent developments illuminate completely new realms for the old technology.
