REVISED COLLECTION 2022

O-O-O is a customisable stainless steel structure that conducts electricity to LEDs that provide subtle illumination. The lightweight curtain can be built to any size, as the number and frequency of the lights in the composition can be adjusted accordingly.

The modular feature of the O-O-O system allows you to decide the length, height, width, and frequency of lighting elements in the hanging composition. The fixtures are lightweight and easily transportable, making them simple to maintain. The accrylic discs that house LED lights and diffuse the light in the same time.

ELEMENT

We can make custom installations in any shape. But we provide packages of 2 lines with 6 elements.

2 Lines, 6 Elements lines 100-1000 mm You can add as many elements as you like.

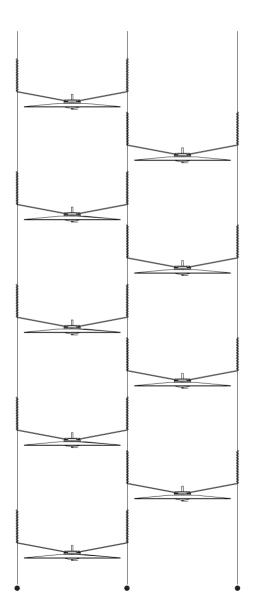

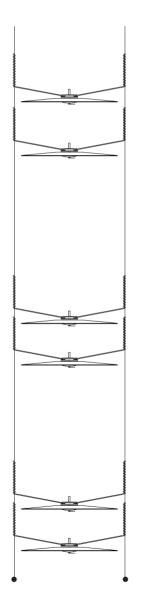

COMPOSITION SUGGESTIONS

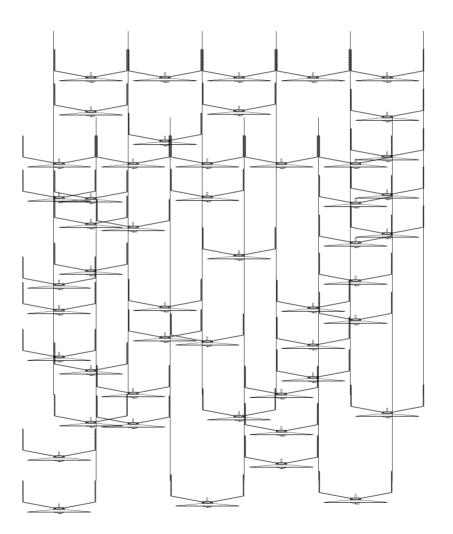

0-0-0 gives you endless possibilities in compositions.

Choose the number of modules and suspension wires to your wishes and vary in shapes and sizes. It is possible to add modules and wires to your collection in a later stage due to the modular railsystem.

DISCOVER

VANTOT works in translating innovative and experimental ideas into refreshing applications, products, and installations. Sometimes, products are made on request as a project. We are specialized in lighting and also creating other products in different categories which will be shown in the following content.

VANTOT; CONTRIBUTING TO THE TRANSITION OF LIGHT

SAM VAN GURP & ESTHER JONGSMA

VANTOT

For Dutch duo VANTOT, it's all in the name. Literally translated from Dutch to mean 'from to', VANTOT focuses on the entire process, starting with a technique and ending with the product. The pair strives to find new applications for innovations in everyday life, and it's not only new-found technologies which have seized their interest. Serving as a guiding light in the duo's work, antiquated techniques are put to good use in modern day outlets, mutually benefiting from today's updated knowledge base.

Take electricity. Although light bulbs have been around for centuries, innovations — such as the rise of the LEDs — have made continuous evolution possible. And today, electronic devices operate on much lower voltages than ever before, significantly decreasing its hazardous aspects. While direct contact with electricity — and light — used to be a no go, recent developments illuminate completely new realms for the old technology.
